Part 1

The break-in

Someone broke in! Again!
A computer screen has been
stolen. It must be some
teenagers up to no good!

A few months later, at another location in the factory.

Disruption in the production,
just when the new models
are about to be rolled out.

A few weeks later.

What actually happened during that break-in a few months ago?

Recommendations

- Continually evaluate the physical security of industrial information and control systems.
- Regularly ensure that any and all connections to industrial information and control systems are secure and relevant.
- Continuously monitor connections and systems in order to detect intrusion attempts in industrial information and control systems.

Protect vital societal functions.

Protect your organisation.

Protect your industrial control systems.

The deployment

Typical. I forgot the DVD with the update.

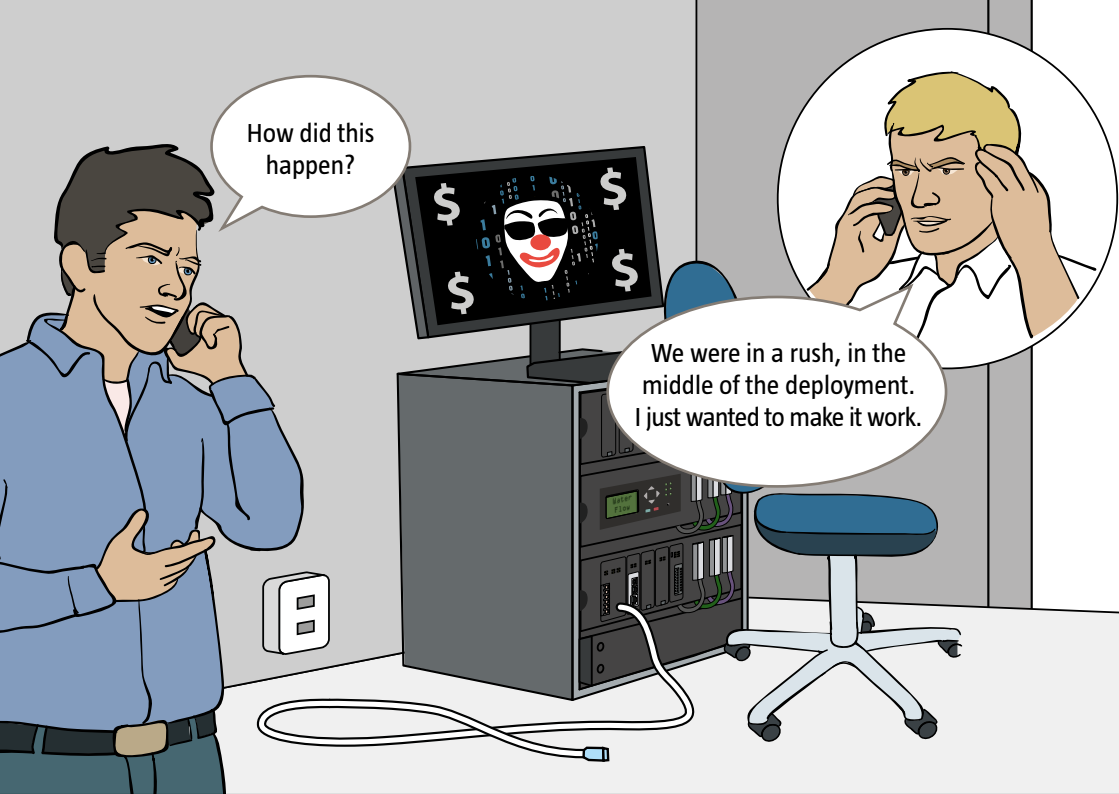

LOADING...

Fantastic! A network socket. All I have to do is connect and download.

A few weeks later.

What is this? A direct connection to the administrative network!

How did this happen?

We were in a rush, in the middle of the deployment. I just wanted to make it work.

Recommendations

- Create a good security culture and heighten awareness of the need for security in industrial information and control systems.
- Conduct periodic technical security audits of industrial information and control systems.
- Regularly ensure that any and all connections to industrial information and control systems are secure and relevant.
- Continuously monitor connections and systems in order to detect intrusion attempts in industrial information and control systems.

Protect vital societal functions.

Protect your organisation.

Protect your industrial control systems.
